

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) A display equipment, ~~for displaying characteristics of a body including at least one of quantities of bone and muscle of the body, the display equipment comprising:~~

~~a belt including~~ a plurality of pairs of electrodes configured to contact a surface of ~~[[the]]~~ a body;

~~means for~~ a measuring unit configured to measure impedance of the body by feeding a measuring current through ~~[[said]]~~ the plurality of the electrodes into the body;

a memory ~~for storing~~ configured to store personal information including at least one of gender, age, height, body weight, length around the wrist, and length around the hand of the body ~~to be measured, into the display equipment;~~

~~means for~~ a calculating ~~at least one of values of~~ unit configured to calculate bone weight and muscular weight of the body on the basis of the measured impedance and said the stored personal information ~~put into the display equipment;~~

~~means for~~ a judging unit configured to judge a somatotype of the body, the somatotype being classified on the basis of a correlation between the ~~at least one of values as~~ calculated bone weight and the body weight; and

a display ~~for indicating~~ configured to display the somatotype ~~[[as]]~~ judged by ~~[[said]]~~ the judging means unit.

2. (Currently Amended) The display equipment ~~for displaying the characteristics~~ as set forth in claim 1,

wherein ~~[[said]]~~ the personal information includes at least one of gender, age, and the combination thereof.

- 3.-4. (Cancelled).

5. (Currently Amended) The display equipment ~~for displaying the characteristics~~ as set forth in claim 1 ~~[[or 2]]~~, further comprising:

~~wherein the equipment can~~ a feeding unit configured to feed a pulsed current through ~~[[said]]~~ the plurality of electrodes into the body, so as to treat the body.

6. (Cancelled).

7. (New) The display equipment as set forth in claim 1, further comprising:

a belt configured to wrap the body, the plurality of electrodes being mounted on the belt.

8. (New) The display equipment as set forth in claim 1, wherein

the calculating unit calculates the bone weight and muscular weight of the body on the basis of the impedance and the personal information;

the judging unit judges the somatotype of the body and a first additional somatotype of the body, the first additional somatotype being classified on the basis of a correlation between the calculated muscular weight and the body weight; and

the display displays the somatotype and the first additional somatotype judged by the judging unit.

9. (New) The display equipment as set forth in claim 1, wherein

the calculating unit calculates the bone weight and water weight of the body on the basis of the impedance and the personal information;

the judging unit judges the somatotype of the body and a second additional somatotype of the body, the second additional somatotype being classified on the basis of a correlation between the calculated water weight and the body weight; and

the display displays the somatotype and the second additional somatotype judged by the judging unit.
